OrgConnect

Phase 1 Concept Prototype

Group 4 · Abe · Bermudez · Enriquez · Guinto · Tania

1. Project Title

OrgConnect: A Web-Based Platform for Student Organization Events, Volunteer Hours, and Peer Tutoring (SDG 4 & SDG 17)

2. Concept

OrgConnect is a web-based platform that centralizes how student organizations run events, track volunteer hours, and offer peer tutoring. Officers publish events, members RSVP through the React interface, and Laravel updates attendance records and computes each member's verified volunteer hours. Members log hours and request tutoring sessions, which follow an approval flow (request, officer approval, status update) enforced by Laravel's role-based rules. Axios connects the React dashboards to the Laravel API, so officers see live analytics on participation, hours logged, and pending requests, while members receive in-app notifications when events are posted or requests are approved.

3. SDG Alignment

- SDG 4 — Quality Education: peer tutoring and shared learning resources give members structured access to academic support.
- SDG 17 — Partnerships for the Goals: the platform strengthens collaboration and coordination among students and organizations.

4. Prototype Overview

This phase presents a Lo-Fi to mid-fidelity clickable prototype covering the system's main screens and user flow. The prototype separates the two user roles — Officer and Member — into their own tabs, since each role has a distinct journey through the system. The interactive HTML version of this prototype is included alongside this document; the screenshots below walk through the same flow for reference.

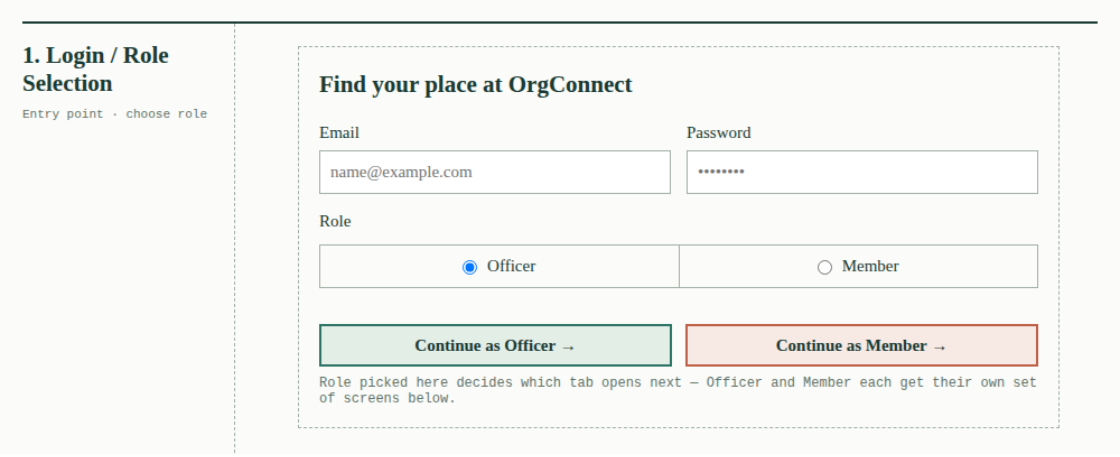

How the flow works

- Login / Role Selection — the entry point for both roles. Selecting a role routes the user to the matching tab.
- Officer tab — Dashboard → Manage Events → Review Hours → Review Tutoring.
- Member tab — Member Home → Browse Events → Log Hours → Request Tutoring.
- Hours and Tutoring are shown once per role: the Officer sees an approval queue, the Member sees a submission form plus their own request status.

5. Screen-by-Screen Walkthrough

Entry Point

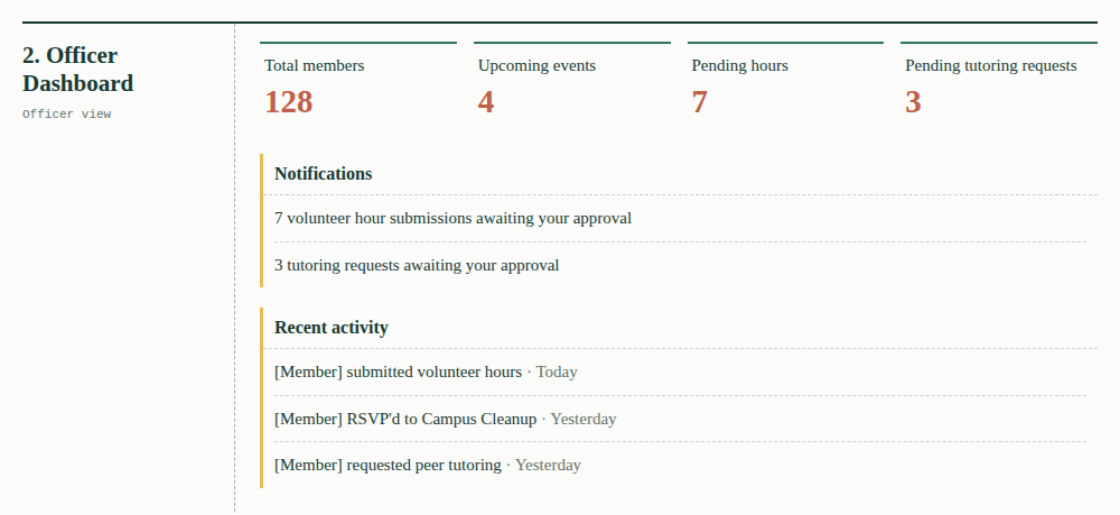

1. Login / Role Selection · *Entry point*

The single entry point for both roles. The email, password, and role fields are shown here; choosing a role determines which tab the user lands in next, which is where role-based access begins.

Officer Tab

2. Officer Dashboard · *Officer view*

Summarizes total members, upcoming events, and pending approvals at a glance. A Notifications panel and Recent Activity feed keep officers aware of what needs attention.

3. Manage Events · *Officer view*

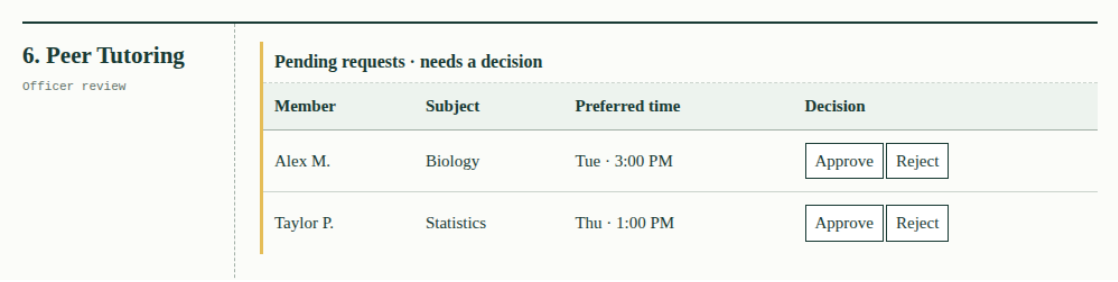

Officers create and edit events, and see RSVP counts per event.

4. Review Volunteer Hours · *Officer view*

Officers approve or reject hours submitted by members, keeping the volunteer record verified and accurate.

5. Review Tutoring Requests · *Officer view*

Officers approve or reject incoming tutoring session requests from members.

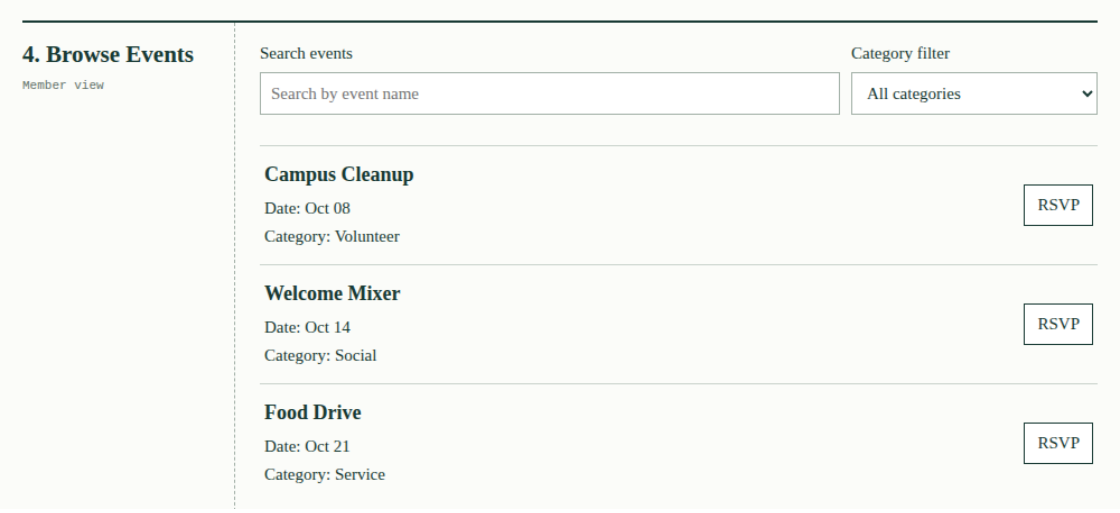

Member Tab

6. Member Home · *Member view*

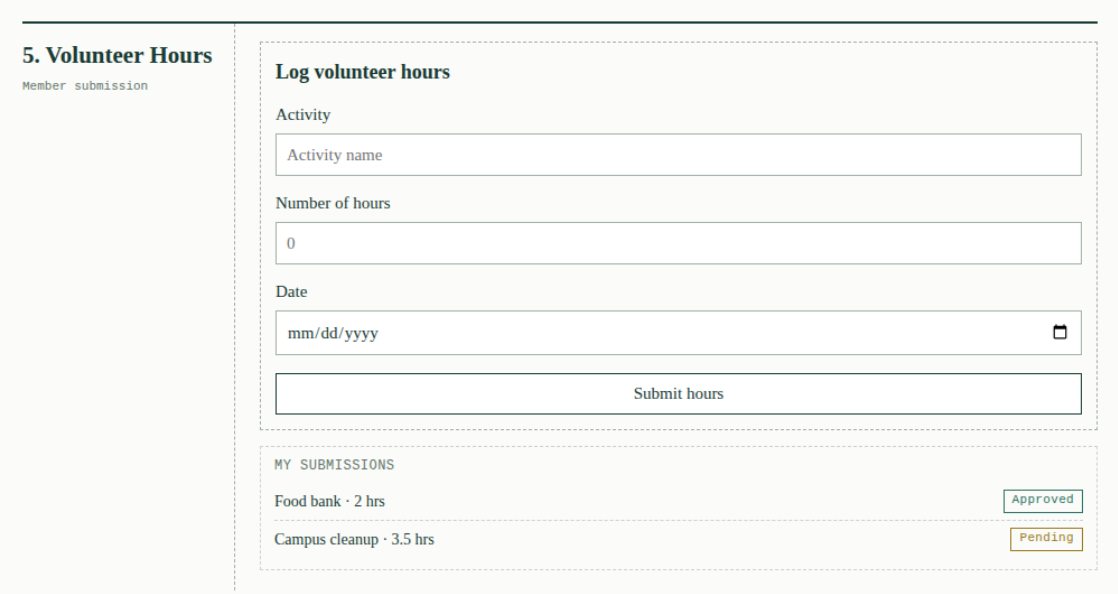

The member's landing screen after login: their own RSVP, hours, and tutoring status at a glance, plus a Notifications panel so they know when something changes.

7. Browse Events · *Member view*

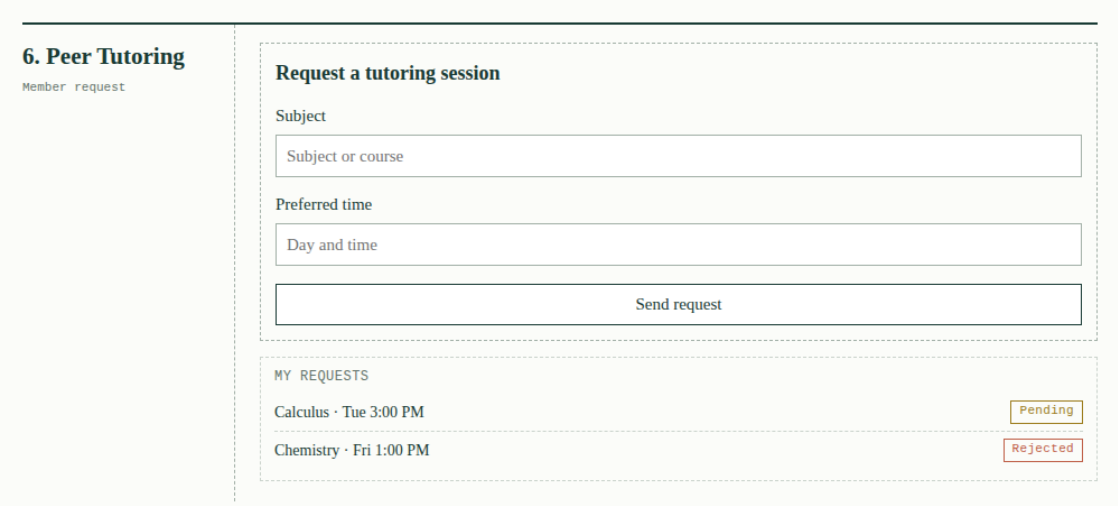

Members search and filter events, and RSVP directly from the event card.

8. Log Volunteer Hours · *Member view*

Members submit hours for approval, and see the status of their own past submissions (Approved / Pending) underneath the form.

9. Request Peer Tutoring · *Member view*

Members request a tutoring session and can track the status of their own requests (Pending / Rejected), matching the proposal's request → officer approval → status update flow.
